

## **Belgian optical module types**

### **Overview**

The two primary types of optical modules are pluggable and embedded modules. Pluggable or hot-swappable modules can be easily inserted or removed from a networking device without shutting it down. Optical modules typically have an electrical interface on the side that connects to the inside of the system and an optical interface on the side that connects to the outside. The optical module serves as a crucial component in optical fiber communication systems, operating at the physical layer, which is the lowest layer in the OSI model. 6T optical modules, 800GE optical modules, 400GE optical modules, 100GE optical modules, 40GE optical modules, 25GE optical modules, 10GE optical modules, GE optical modules, FE optical modules, and so. Many partners do not know much about the packaging types of optical modules, so in this article, ETU-LINK introduces you to what are the common packaging types of optical modules, right?

1. Traditional classification method: generally classified from the perspectives of packaging method, transmission rate, data transmission path, operating temperature, mode, wavelength.
