

Can I directly use the internet after plugging a fiber optic cable into a switch

Overview

The short answer is no - RJ45 connectors are designed for electrical Ethernet signals, while fiber optics transmit light pulses through glass or plastic. However, modern networks often combine both technologies. When switching to fiber internet, many users wonder if they're able to use their own router instead of the one provided by their internet service provider (ISP). In this guide, we'll explain router compatibility, setup steps and whether upgrading your router is necessary to maximize fiber speeds. I am thinking of getting the deco x75 pro mesh routers that offers (1)- 2.5gbps port and (2) gigabit ports. Compatible router: Verify that your router supports fiber optic input (look for an SFP or WAN port labeled). The ONT converts the light from the fiber into electrical signals that run via an ethernet cable. I am not very technically savvy. If we wanted to do this, it's my understanding we need a switch?

So all of.
