

Certified Vertical Cavity Surface Emitting Laser 100G

Overview

Everbright's 100G PAM4 VCSEL array is a vertical cavity surface emitting laser based on GaAs substrate with a central wavelength of 850nm, which is used in Optical communication applications for 100 Gbps PAM4 multimode fiber link transmission. The vertical-cavity surface-emitting laser (VCSEL / 'vɪksəl /) is a type of semiconductor laser diode with laser beam emission perpendicular from the top surface, contrary to conventional edge-emitting semiconductor lasers (also called in-plane lasers) which emit from surfaces formed by cleaving.
