

Core switch re-partitioning VLANs

Overview

Move couple of VLANs at a time to begin with, delete the default gateway/SVI from the core switch and move it to the firewall and make sure to trunk from core > firewall. If your access/distribution switches connect the user vlans to the core using trunks, then you will need to configure the vlans on both the access/distribution and on the core. 3x) is connected as bonded (Adaptive load balancing). 3ad Link aggregation would be better. Now it suddenly is working fine. As a test I was able. Currently we are using a single MS425 core switch to handle all our vlan interfaces and routing. I was wondering if it is possible for the MX to handle some vlan interfaces and keep some on the core as well?

Thanks Mark. We have a school network currently running on a Cisco ASA 5516-X connected to a 9200L acting as a core switch, with VLAN information being sent from the core switch to the access switches via VTP. We are demoing a Palo Alto firewall and I'm interested in getting visibility into our intra-network.
