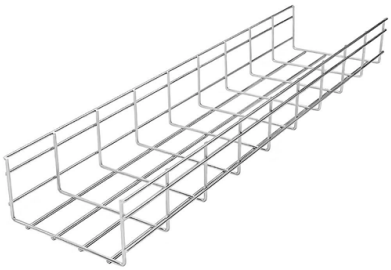
# Cryogenic Solutions for Ukraine s Hybrid Energy Systems



## Overview

This analysis builds on the IEA's September 2024 report, Ukraine's Energy Security and the Coming Winter. This report highlights key lessons learned from Ukraine in the context of Russian attacks on Ukrainian energy infrastructure following the full-scale invasion in 2022. The report focuses on operators of wind, solar, hydro, and nuclear power plants. While Ukraine made strong strides in rebuilding and strengthening the resilience of its energy system this past spring and summer, the situation remains fragile. The IEA examines the full spectrum of energy issues including oil, gas and coal supply and demand, renewable energy technologies, electricity markets, energy efficiency, access to energy, demand side management and much more. Through its work, the IEA advocates policies that will enhance the. Through USAID, the United States works with Ukraine's government, energy private sector, and civil society to enhance Ukraine's energy security and transform Ukraine's energy sector into a modern, market-oriented, EU-integrated engine of growth. USAID is providing direct support to improve. This Report has been prepared in the framework of the Regional Programme of Technical Cooperation (RPTC) project “UNECE early development response: reconstruction of Ukraine – restoring connectivity and rebuilding infrastructure” by Mr. Roman Podolets with support from Mr. Grassroots Journal of Natural Resources, 8(1): 801-827.
