

# Deleting gateway configuration on aggregation switch

## Overview

Delete the following configuration line from the MultiEdit window: In the following procedure, OSPF and PIM protocols are enabled globally, and a unique IP loopback address is configured on each aggregation switch. Type CTRL+Y to exit the console.

<cr> Variable Definitions The following table defines parameters for the delete global command. Deletes the global gateway IP address for Fabric. The access-aggregation layer provides default gateway services to the layer 2 access switches and consolidates bandwidth from the lower speed access ports into high-speed uplinks to the core. "Campus Networks Typical Configuration Examples" provides typical campus network networking modes and a variety of deployment examples. This setup ensures minimal downtime and increased throughput by aggregating multiple links. When configuring MC-LAG, it is important to properly.
