

Does the 100Mbps broadband connection to your home have a fiber optic splitter in the middle

Overview

The ONT is the heart of the fiber connection within your home. It's a small box, usually provided and installed by your ISP, that converts the optical signals from the fiber optic cable into electrical signals that your router and devices can understand. Fiber optic internet is generally installed in the following 5 steps, which we'll dive deeper into throughout the article: A technician checks your area and prepares the connection from the neighborhood fiber network. Electrical Breaker Panel: Powers the ONT and keeps everything running. Router: The device that sends Wi-Fi to. Speed and reliability are essentially the core of a good internet connection, and it's why fiber-optic internet is a significant upgrade compared to other types of internet connectivity — including satellite, DSL and cable internet.

Article Content
