

Exposed connecting corridor cable frame

Overview

202 means that you can't use pvc cable clips as the only method of support on an exposed surface, which is understandable. Using the patented grommet based icotek cable entry system, a large number of pre-terminated cables (up to 65 mm in diameter) and cables without connectors (up to 75 mm in diameter) can be quickly routed into enclosures, control panels or machines and be sealed with up to IP66 / UL type 4X* rated. Solve your crowded or low-plenum corridor condition problems with SINGLESPAN for Acoustical and SHORTSPAN for Drywall applications. Reduce or eliminate framing or hanger wires to structure in the plenum - 2/3 less material. Span 9'-0" (cross tees every 16" O.) with no support and up to 14' with. Cable entry systems provide easy installation of cables through enclosures or bulkhead surfaces. Split-frame systems clamp together with grommets for quick installation without disassembling connectors; single frames allow installation of non-terminated cables. FDA compliant models are available. The various CABLEFIX® products offer significant time and space savings compared to installing traditional cable glands.
