

# Fiber Optic Cable Distance in Homes

## Overview

Using single-mode fiber cable means it can carry a signal up to 100 kilometers (over 60 miles) without serious loss. Nevertheless, that's plenty for indoor or short outdoor use. In this blog, I will discuss the fiber optic cable distance, the effect factors, how to choose the right fiber optic cables, and how to compare the transmission distances of single-mode and multimode fiber optic cables. Attenuation is the progressive loss of signal strength that occurs as light travels through the fiber. The greater the distance, the greater. Fiber to Ethernet media converters adapt between a typical RJ-45 copper Ethernet cable and fiber-optic cable. Range tells you how much ground you can cover before needing tools like optic cable extender devices or extra cables. Direct point-to-point links with OS2 single-mode 1310 nm typically use 10 km+ of practical reach.
