

## **Fiber optic cable cannot be pulled up**

### **Overview**

Fiber optic cables should always be pulled by the strengthened yarn fibers inside the outer jacket. This article explores recommendations for pulling and installing fiber optic cable. Most fiber optic cables boast a pull strength of 100 - 200. Fiber optic cable is strong, reliable and built for long-term performance, but it still needs to be handled correctly during installation. Most fiber damage does not come from normal operation after the system is live. The cables can be single-mode or multi-mode, with single-mode cables used for long-distance transmissions and. Recommendations for Fiber Optic Cable Installation Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. During installation, all curvatures should be smooth.
