

## Fiber optic patch cord with round connector cannot be plugged in

### Overview

A common mistake is to plug in connectors without cleaning them. Dust, dirt, and oils build up very quickly on the fiber endfaces, which can prevent light from passing and cause intermittent faults. Without the proper adapter, signals can degrade or become unstable, which can dramatically decrease the reliability of a network. Whether back in the late 1990s or today, you will see 8P8C RJ45 type connectors at the end of Ethernet patch cords and keystone jacks mounted in walls running back to patch panels. The T568A and T568B color code has remained the same too, dictating the wiring color code sequence to make proper. Fiber optic patch cables are vital to every optical network, establishing connections to servers, switches, storage devices, and other equipment and devices in data centers, telecommunications rooms, and other network spaces.
