

Grounding of metal strips in distribution box

Overview

Grounding of the units: Attach a ground wire from one of the threaded studs (A) at the bottom of the housing, to the mounting plate (B). The ground resistance between. Electrical grounding is a fundamental safety measure designed to protect people and property from electrical faults. It establishes a dedicated, low-resistance return path for stray electrical current, preventing dangerous voltage from building up on conductive surfaces. Without this connection, a fault could energize the box itself, turning a seemingly harmless component into a serious danger. This guide on how to ground a metal box will walk. In this comprehensive guide, we're going to demystify the process of how to ground a metal box. Each DISTRIBUTION BOX and controller must be grounded. 26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used.
