

# Grounding of network cabinet power distribution box

## Overview

Grounding of the units: Attach a ground wire from one of the threaded studs (A) at the bottom of the housing, to the mounting plate (B). The ground resistance between all. Today, we're diving deep into the world of distribution box grounding, breaking down the standards, and shining a light on those sneaky mistakes that even experienced electricians sometimes make. Each DISTRIBUTION BOX and controller must be grounded. 26 mm<sup>2</sup> (10 AWG) ground wire must be used, and in all other markets a 6 mm<sup>2</sup> must be used. The whole structure consists of a metal circuit, a protect bus, and a ground wire. Network hardware is connected to PDUs and constantly. What type of fasteners do your mounting rails require?

What is the maximum depth of the equipment being mounted?

1. Rail Depth up to ^Grounding strip kits, grounding busbar kits, and front to back rail jumper kits are supplied with mounting hardware based upon. These Grounding Kits from Great Lakes come complete with tinned copper grounding straps and all necessary washers and nuts, making it easy to achieve efficient power flow throughout your cabinet. This item is a deferred, subscription, or recurring purchase.
