

How long should the cable tray and support be fixed

Overview

Generally, standard trays require supports every 6 to 10 feet, while heavy-duty, long-span trays can handle distances of up to 20 feet between supports. To determine the proper spacing, consult the manufacturer's load capacity chart, which accounts for the total weight of the. The primary rulebook used in the safe use of cable trays is NEC Article 392. This is a description of how to select, install, and support these metal or plastic frames, on which electrical wires are installed. 10 (B) (1) (c), the maximum allowable rung spacing for cable trays supporting these sizes of single conductor cables is 9 inches (229 mm). Communication and control cables: Optical Fiber Cables: Cables rated for different voltages can be installed in the same tray, but. Cable tray use improves system safety by preventing overheating and physical damage to cables. Additionally, cable trays enhance cable management by reducing clutter and ensuring proper routing in industrial and commercial settings.
