

How many branches are connected from the main distribution box

Overview

The main breakers deliver electricity to the two bus bars, which in turn pass it along to the secondary circuit breakers. The service equipment contains the main overcurrent protection (circuit breakers or fuses) and switches to disconnect from the utility. Is there a maximum number of junction boxes (and then branches coming off of those junction boxes) that one circuit is allowed by code to have?

Could you theoretically just continue to add junction boxes to one main line of power and split that power into new branches over and over?

This appears to. Article 100 defines a “branch circuit” as the conductors between the final OCPD and the receptacle outlets, lighting outlets, or other outlets.
