

How many pigtails are needed for the ONU port

Overview

They are enough for all services. For SFU (Layer 2), don't need to set VEIP For HGU (Layer 3), VEIP should be 1. DBA profile and traffic profile need to be added. As shown in Figure 4, EPON defines the following port types:

- OLT port—A physical ONU-facing port on an OLT. Each OLT port on an EPON card acts as an independent OLT device. For instance, the FS ONU TA1910-4GVC-W, designed for single-family homes, includes a PON port connected to the OLT, along with 4 LAN ports, 2.

This network is suitable for building access networks such as fiber-to-the-home (FTTH), or fiber-to-the-office (FTTO), or fiber-to-the-company (FTTC) for providing internet access by running fiber optic cable directly from an internet service provider to a user's home or business. Add an ONU Profile Adding an ONU to the OLT needs to bind an ONU profile. ONU profile defines the type and the number of ONU ports, and some. This Application Engineering Note will serve as a guide to selecting the best Corning Optical Communications High Fiber Count solution for your structured cabling application.
