Specific details of selecting and installing a fiber optic attenuator include: start with measured optical power values; select a fixed or variable device that will accommodate changes in the network; install and align connectors properly; and follow an exhaustive installation . Thorough preparation is imperative before commencing the installation of an optical attenuator. Assemble all necessary tools and equipment, such as a fiber cleaver, fusion splicer, optical power meter, and connector cleaning tools. These are the cornerstones of a seamless installation. Equally. Whether using a fixed optical attenuator or a variable optical attenuator, the user must ensure a proper connector joins the two systems, and in doing so, disable the optical power from overwhelming the signal by equivalent attenuation. Step 2: Fixed or Variable?
