

How to install the pigtail at the back of the 86-cell connector

Overview

Cut tape keeping the protective loom closed, remove the wire terminal from the connector, obtain a replacement with weather seal, crimp it on a new length of wire, cut the car's original wire back a bit, install new wire/terminal and splice in-line, heat shrink, tape up. Cut tape keeping the protective loom closed, remove the wire terminal from the connector, obtain a replacement with weather seal, crimp it on a new length of wire, cut the car's original wire back a bit, install new wire/terminal and splice in-line, heat shrink, tape up. If you're dealing with broken connectors, brittle wires, corrosion, or intermittent electrical issues, replacing the connector with a pigtail is often the best fix. Kyle walks you through cutting back damaged wiring, matching wire colors, making solid connections, and sealing everything so. Follow these steps to create safe and reliable connections. First, measure the wires you need. No confusion, no part hunting, just results. Pigtails are. Second, how do you remove the old connector and install the new one?

Also, I haven't been able to figure out of what each pin does from what I've searched on other threads.
