

How to install the protective sleeve on the optical cable

Overview

First, slide the protection sleeve onto the fiber (this can be very challenging so we recommend using the Quick Sleever® PSI-15). Then, perform the fusion splice. After the fusion splice is performed the sleeve is slid over the splice to cover the joint and exposed fiber. A clearly. In this video, we explore the FIS UltraSleeve® Protection Sleeve and how to install UltraSleeve® onto a pair of fused optical fibers. The following are the general installation steps for reference: First, preparation Material preparation: Ensure that tools and materials such as fiber tubes, optical fibers. The protection sleeve was created to protect a spliced fiber and must be installed on the fiber before the fusion splice is performed (otherwise you will have to break the fiber and start again). A spliced bare fiber is very fragile.
