

## Is ODN an optical splitter

### Overview

Picture ODN as the unsung highway system ferrying data at light speed from your ISP's central office straight to your doorstep. This passive layer is known as the Optical Distribution Network (ODN). Operators consider ODN design as one of the most important factors affecting: Network. User equipment ONU is connected through the ODN network (composed of optical fiber and a passive optical splitter). Realize the control, management, and ranging functions of user equipment ONU. Optical Network Unit (ONU)/Optical Network Terminal (ONT) ONU converts optical signals transmitted. The Optical Distribution Network (ODN) is the passive fiber infrastructure that connects the central office OLT to each subscriber in FTTH, FTTB, and FTTO deployments. Unlike active networks with powered components, ODNs use unpowered splitters and cables to distribute signals—making them.
