

Is a router necessary to convert fiber optic cable to a network

Overview

Yes, fiber internet requires specific equipment including an Optical Network Terminal (ONT) and a compatible router. The ONT converts fiber-optic light signals into electrical signals your devices can use. From the optical network terminal to the router that brings your home online, each piece plays a critical role in delivering the speedy, seamless experience fiber is known for. Let's take a closer look at the fiber to the home equipment you'll need and answer some of the most common questions about. The short answer is no, you don't necessarily need a special router for fiber optic internet. This means you don't need a specialized. Here's the full scoop: A modem is essential in traditional cable or DSL internet connections because it converts the analog signal from the internet service provider (ISP), such as Hunter Communications, into a digital signal that your devices can understand. However, not all routers can create a Wi-Fi network if it's not fiber-ready.
