Clearance: Electrical panels must be installed in a readily accessible area with a minimum clearance of 30 inches (762 mm) wide, 3 ft (36 inches or 914 mm) deep, and 6. 5 feet (\approx 2 meter) high in front of the panel. The panelboard's door (hinged cover) shall be able to be opened to a full 90°. The exposed copper wire is fine. It is not intended to be a comprehensive design guide; however, many features of design are explained herein. Copper wire systems are the most widely used of all electrical systems and are often found whenever.
