

# Low-noise passive optical networks for mining

## Overview

**Abstract:** This paper discusses an optical signal noise ratio (OSNR) in passive optical network (PON) using a distributed Raman amplifier (DRA). Each of the optical network units is connected to a corresponding plurality of the optical splitters, and the optical network unit is used to connect a plurality of application network systems underground to a mine-used passive optical network. Recently, 50G PON becomes mature gradually, which means it is time to discuss beyond 50G PON. We focus on asymmetric OSNR properties for up/downstream signals in 10-Gbps PON systems and study the dependency of OSNR on Raman pump power, splitting. Semtech delivers high-performance analog and mixed-signal ICs that reduce the cost and power consumption of PON optical networking equipment and enable the deployment of next generation PON networks. What is a passive optical network (PON)?

A passive optical network (PON) is a fibre optic network. Laser => Which type should be used?

Laser Driver: Photodiode => use of PIN or Avalanche (APD) ?

TIA and MA:

## Article Content

Frequency offset and phase noise-tolerant coherent PON with fast ...

In this work, we experimentally demonstrate a phase-insensitive coherent PON. An optical carrier is added by the modulator bias as an offset in signal constellation to eliminate the phase ...

Key Technologies for a Beyond-100G Next-Generation ...

To the best of our knowledge, this review is the first to survey the high-speed 100 Gbp next-generation passive optical network (NG-PON). The insights ...

Mining passive optical network system

Each of the optical network units is connected to a corresponding plurality of the optical splitters, and the optical network unit is used to connect a plurality of application network...

Industrial Passive Optical Network (PON) Applications in Smart Mining ...

In this article, a network architecture based on the passive optical network (PON) technology, the so-called industrial PON, is proposed to enable the next generation industrial networks.

Passive Optical Networks

What is a passive optical network (PON)? A passive optical network (PON) is a fibre optic network that uses passive (unpowered) optical splitters to connect a single source to multiple end users ...

Industrial Passive Optical Network (PON) Applications in Smart Mining ...

This paper proposes a network architecture of industrial passive optical network (PON) for smart mining. Typical network services in the coal mining industry are evaluated.

112.5 Gbit/s long reach passive optical network with over 31 ...

We experimentally demonstrate the downstream transmission of 112.5 Gbit/s pulse amplitude modulated (PAM) signals in the O-band for future time-division multiplexed long-reach ...

Transceivers\_for\_Passive\_Optical\_Networks [Compatibility ...

Main challenge is to design the transceivers for the upstream, because of the bursty nature of traffic To avoid interference in the upstream and increase bandwidth efficiency the Optical Network Unit (ONU) ...

Flexible Coherent Optical Access: Architectures, Algorithms, and ...

C. Yang, H. Wang et al., "100G fine-granularity flexible-rate passive optical networks based on discrete multi-tone with PAPR optimization," *Journal of Optical Communications and Networking*, vol. 14, no. ...

Key Technologies for a Beyond-100G Next-Generation Passive Optical Network

To the best of our knowledge, this review is the first to survey the high-speed 100 Gbp next-generation passive optical network (NG-PON). The insights from this review can benefit the ...

Asymmetric optical signal noise ratio in passive optical networks ...

We focus on asymmetric OSNR properties for up/downstream signals in 10-Gbps PON systems and study the dependency of OSNR on Raman pump power, splitting loss, and optical cable loss, ...
