

Make a reserved space behind the cable management rack

Overview

There are about 3 inches of space in the bottom of the enclosure before reaching the rack space area, which allows for cable entry up into the enclosure. Enclosures with a unique “up-formed base” provide interior room for cable management and coiling unused wire. Take note of your servers, switches, and other devices, power distribution units (PDUs) locations, and available rack space to plan clean cable paths that avoid clutter, maintain airflow, and simplify maintenance. Once you understand your current layout, think through how cables will move through. When care is given to the management and maintenance of cable entering the rack or enclosure system, the goals of providing customers with neat, organized and effective system are easily attained. Today's electronic systems' wiring includes voice, data, video, audio, security and control. Disorganized cables can lead to network downtime, overheating, and even safety hazards like tripping or fire risks. By routing cables horizontally, this practice not only enhances the aesthetics of IT setups but also improves airflow, reduces.
