

Mesh cable tray belongs to the mode

Overview

Solid-bottom trays – prioritize cable protection in environments with contaminants or sensitive cables. Channel trays – compact, for short runs and light cables. systems support and route all types of cables. Depending on the type and version of mesh cable tray, as well as the corrosion protection used, the mesh cable tray systems can be ambient temperatures of - 20 °C to + 120 °C. Unlike conduit systems, cable trays allow cables to be laid in bundles, improving accessibility, heat. Standard length of about 10 feet (118") Wire Mesh tray is generally used for telecommunication and fiber optic applications and are installed on short support spans, 4 to 8 feet Other sizes be produced according to customer's drawing. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned.
