

Relay protection calibration device

Overview

With its novel and future-oriented approach our software solution for system-based protection testing, performs tests independent of relay type, relay manufacturer, and offers extensive parameter settings. It focuses on the correct behavior of the protection system by simulating realistic events in the power system. RelaySimTestSpecifically designed for settings-based protection testing with a high degree of automation, our modular software Test Universe offers numerous functions and application-optimized test modules that save you valuable time. Test UniverseUse CMControl P for quick and easy manual testing. CMControl P is available as an App for Android tablets and Windows PC, or as a dedicated front-end device. CMControl PWith this software the CMC test set becomes a multifunctional measurement and recording unit. You can use EnerLyzer in parallel with the software used for operating your CMC. EnerlyzerThe open programming interface CMEngine enables you to integrate the CMC test sets into your own testing environment and control them within any type of application. CMEngine.
