

## Shielding the core switch

### Overview

This article will discuss critical aspects of core switches, including their essential functions, distinctions from other switches within the same category, and criteria to remember when purchasing one for your institution. A core switch is a high-capacity, high-performance Layer 3 switch positioned at the physical backbone of an enterprise network. Engineered to aggregate massive volumes of data from distribution switches, it provides ultra-low latency and maximum throughput to ensure uninterrupted routing and packet. A core switch in networking serves as the high-capacity backbone, italic centralizing data flow and ensuring efficient communication between different network segments. Simply put, it's the kingpin that keeps your network humming. These networks are designed with three tiers that facilitate strategic. This is my first time to configure core switch on packet tracer and still confusing in core switch how to interconnect all the core switch?
