

Switch with 2 fiber optic cables per group of interfaces

Overview

What is a 2 fiber port 8 LAN port fiber optic Ethernet switch?

It is a hybrid Ethernet switch that integrates two SFP fiber ports (1. 25 Gbps) and eight RJ45 UTP ports (10/100/1000 Mbps), enabling seamless conversion between fiber and copper networks. Most modern fiber-enabled network switches require an SFP transceiver module featuring a duplex (two strand) multimode OM3 or duplex single mode OS2 connection with LC connectors. Direct attach cables with pre-terminated SFP connections may also be used. SFP modules insert into these slots and require two strands of fiber, typically duplex Using multi mode fiber (for runs under 1000. I am planning to connect core switch to multiple switches using 6 strand fiber cable. which type of cnnnection is resilient Star or Ring?

?

?

If I make star then do i have to use new cable to each switch or strand of a cable to patch other switch?

?

Thanks. It usually depends on the model of the switches. I need to connect a single 3750G - 48 ports switch to a single 2960 - 48 ports switch and it needs to be through a fiber. Well, I. Our high-performance Fiber Optic Ethernet Switch with 2 Fiber Ports...
