

## The network cabinet is not deep enough so the door can't be closed

### Overview

Choosing the correct depth also enables you to close the front and rear doors without needing to push against the hardware. This is why it is important to measure your hardware accurately and pair it with common. If you put the rack ears on correctly and the UDM is hitting the back of the rack, your rack is not deep enough. ) The cabinet it needs to go into however is pretty old and not as deep as our other cabinets. Overnight I grabbed one of the 1920S from the other. Server cabinet sizes are not uniform, and the improper depth can cause overheating, poor cable management, or even needing to purchase new equipment in general. While. A guide to selecting server cabinets with some of the most important FAQs covering how to size a cabinet width, depth and height, typical colour and door options, delivery times, accessories available, installation questions to help ensure a cabinet can be delivered and installed easily, and some. The trend towards denser rack-mount servers has affected network enclosure design, resulting in a need for deeper cabinets. For instance, standard cabinets are at least 36 inches (900 mm) deep or even deeper. One particular server is 40 inches (1,000 mm) deep and requires a 48-inch- (1,200 mm) deep. This SmartRack® 6U rack enclosure is designed for home and office network wiring closets, retail locations, classrooms, back offices and other areas with limited floor space where you need equipment to be secure, organized and out of the way.
