

# Three Signaling Methods for Relay Protection

## Overview

These methods include comparing sequence components ( $V_0$  vs.  $I_2$ ), and cross polarization methods utilizing VBC for IAG and IAB faults as well as traveling wave relationships. com IEEE Southern Alberta Section PES/IAS Joint Chapter Technical Seminar - November 2016 Protective Relays - Technical Seminar Nov 2016 - Copyright: IEEE 2 Abstract: Protective relays and devices. Abstract: Directional overcurrent protection IEEE device (67) refers to protection functions that utilize some angular relationship component of current or current and voltage to determine relay directionality. Also principles of various protective relays and schemes including special protection. In electrical engineering, a protective relay is a relay device designed to trip a circuit breaker when a fault is detected. The applications of the different types of protection systems for the protection of various types of equipment and transmission lines are.
