The device greatly improves the integration and intelligence of the secondary equipment of the high-voltage switchgear, effectively monitors the operation status of the switchgear, improves the safety of the switchgear operation, and contributes to the construction of. Abstract: The intelligent control device can be used for 3~35kV indoor high-voltage switch cabinets, suitable for various switch cabinets such as central cabinets, handcart cabinets, fixed cabinets, ring network cabinets, etc., with a primary circuit simulation diagram and switch status indication. PDU switches, or Power Distribution Unit switches, are essential components in power distribution cabinets that play a crucial role in managing and distributing electrical power effectively. Data centers, hospitals, factories and a wide range of other facility types that require continuous or near-continuous. An Intelligent Control Device for Switch Cabinet is an advanced electronic smart meter management device designed to provide monitoring, control, protection, and communication functions within electrical switch cabinets or motor control centers (MCCs). These devices by Elecnova are integral.
