

# What are the types of civilian telecommunications optical cables

## Overview

Fiber optic cables are categorized by their mode (Single-mode OS2 vs. Multimode OM3/4/5), construction (Loose Tube vs. Tight Buffered), and application environment (Indoor/LSZH, Outdoor/ADSS, or Armored). Unlike copper wires, which are limited by lower data transmission speeds, shorter transmission distances, and higher susceptibility to electromagnetic interference, fiber optic cables offer unparalleled performance and can dominate connectivity in the landscape of network infrastructure. Three primary cable categories are: twisted-pair copper cables, coaxial cables, and fiber optic cables. In 2026, the most critical types for high-bandwidth networks include MTP/MPO for data centers. From the fiber core and core size to single mode fiber and multimode fiber cables, each type of optical cable serves a specific purpose depending on transmission distance, network requirements, and installation environment.
