

What does ks represent in relay protection

Overview

The KS relay is a polyphase compensator distance type relay used with the type KD distance relay to prevent tripping while out-of-step or out-of-synchronism conditions exist on the system. It does not prevent or delay the type KD relay from tripping on phase-to-phase faults within its protective. Accurately detecting and protecting against single-phase-to-ground faults is one of the most challenging tasks in distance relay protection. At the heart of this challenge lies the K factor, a parameter integral to ensuring accurate relay operation and fault identification. A sensitive relay improves the reliability of the system. The norms of protection of generators, transformers, lines and capacitor banks are also given. These numbers are based on a system that is adopted by a standard for automatic switchgear by Institute of Electrical.

List of Device Numbers and Acronyms - Free download as PDF File (.pdf), Text File (.txt) or read online for free. The document lists over 100 device numbers and acronyms used for protective relays and ...

Sensitivity of a Relay

The sensitivity of a relay is mentioned as a ratio of the minimum value of short circuit current to the minimum value of the quantity for the operation. The sensitivity is indicated by a sensitivity factor K_s

SCHEMATIC REPRESENTATION OF POWER SYSTEM ...

Prepared by Working Group I5 Working Group Assignment presentation of protection and control relaying. The report will identify methodology behind these practices, present issues ...
