

## What type of distribution box uses a shunt trip

### Overview

In low-voltage DC power distribution systems, circuit protection is not just about overcurrent and short-circuit protection—it also requires remote control and emergency disconnection features. That's why many DC circuit breakers (1P/2P, 100/200VDC, 125A) are equipped with MX+OF. The Knox Remote Power Box® enables emergency responders to shut down power rapidly and securely. Designed to operate a shunt switch remotely from a safe distance, the Knox Remote Power Box® supports electrical power disconnect for buildings, equipment, and systems such as electric vehicle (EV). What is a Shunt Trip (SHT)?

A Shunt Trip (SHT) is an accessory that allows you to remotely trip (open) the MCCB using an external electrical signal. Think of it as the “Emergency OFF” switch for your breaker. The coil sits idle until it. Eaton's shunt trip safety switches, a market exclusive, provide remote switching and visible means of disconnect for commercial and industrial applications. In addition, the shunt trip technology enhances safety by providing a means to open a safety switch electronically. I certify that the installation address is accurate and the assigned serial number will be installed at the address provided. A standard breaker already monitors current and trips.
