

## **Wiring from the low-voltage box at the bottom of the well to the cable tray**

### **Overview**

Lay all the cables in the trench with the water piping from the well. Connect all conductors within the trench. Had a new well drilled at my house and a submersible pump installed. The well pump contractor ran the following wire from the pressure switch to the outside and down the well casing to the pump. The process of installing a new system or replacing an existing pump requires a methodical approach to ensure both longevity and safety of. Well pump electrical requirements define the minimum standards for safely supplying, protecting, and controlling power to submersible and above-ground pump motors used in private water supply systems. My question (s) begin here, at some point it seems that the 220v at well head turns to 120v. Quick Answer: "2-wire" and "3-wire" refer to where starting components are located. 3-wire pumps use an external control box (plus ground = 4 actual wires).
